

Communication

SPEECH THERAPY SERVICES:

& Cognition

The Indiana University Speech and Hearing Clinic provides assessment and therapy for adults with acquired speech, language and cognitive disorders, including brain injury, stroke, brain tumors, and progressive disorders including dementia, ALS, Parkinson's Disease and others. Individual therapy is designed to maximize each individual's communicative performance in daily life. For more information about evaluation and therapy services, please call (812) 855-1069.

COMPREHENSIVE COGNITIVE-LINGUISTIC EVALUATION

- Formal and informal assessment of communicative and cognitive strengths and areas of need
- Determination of candidacy for direct speech-language treatment and/or family training
- Assist physician in determination of a diagnosis
- Establish baseline for current functioning

COGNITIVE-LINGUISTIC TREATMENT OPTIONS

Treatment focuses on education and implementation of individualized strategies designed to maximize communication and cognitive functioning at home and in the community. Evidence based treatment options may include cognitive stimulation, external memory aids, memory training programs, and direct intervention with both the individual and family/caregiver.
